Long haul network, Chile National WAN

Project	Executor
<ul style="list-style-type: none">• Long haul La Serena – Santiago• Link La Serena – AURA Gatehouse• La Serena - Santiago Backup link (4Gbps)	REUNA
<ul style="list-style-type: none">• DWDM equipment	REUNA & AURA
<ul style="list-style-type: none">• Operation of the long haul infrastructure	REUNA

Mountain - Base Link	AURA
-----------------------------	-------------

La Serena – Santiago (primary link)

- 1 pair of fibre over 700Kms (new cable LD3T)
- Over poles along public road (road to the east)

La Serena – Santiago (primary link)

- Type of fiber G.652
- 6 intermediate nodes along the path, with housing to host smaller nodes (amplifiers)
- Two types of fibers: Backbone and local loops to the intermediate nodes.

Status

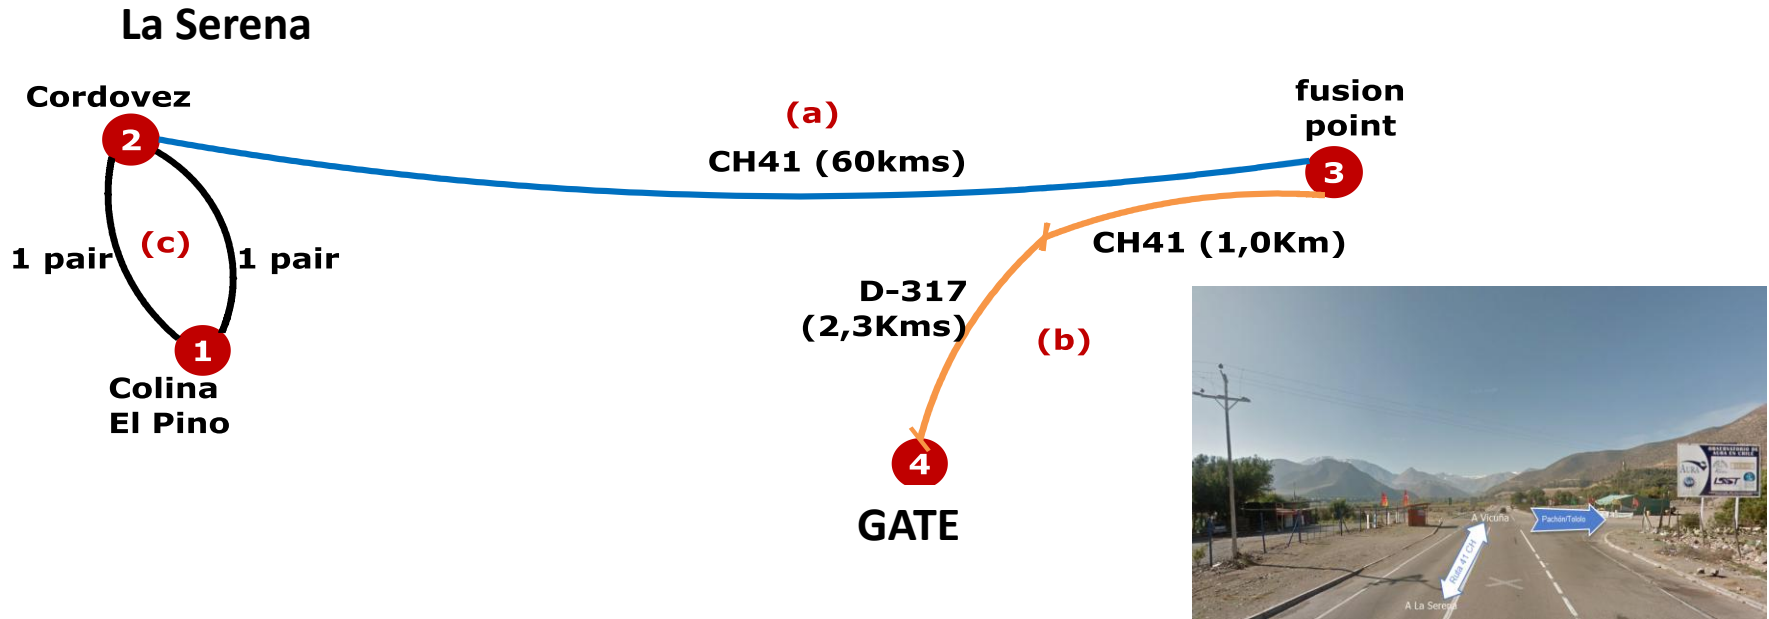

- Backbone fiber finished
- Local loop under construction

Future steps

- Final measures of the total fiber (telco provider)
- Reception plan (REUNA)

La Serena – AURA Gate

Path	Status
Long haul La Serena to CH41 (road to Vicuña)	Ready
Local loop from CH41 to GATE	Pending
Local loop in La Serena city	Pending

La Serena – Santiago (secondary link)

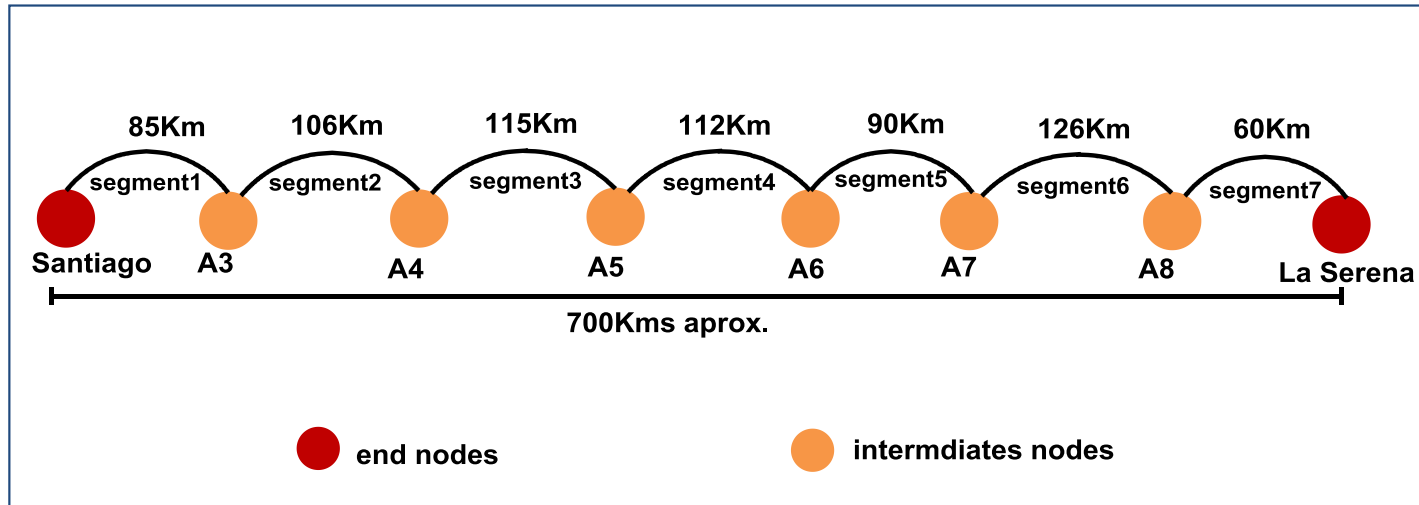

- Short term: 10Gbps link
- Long term: at least 40Gbps link

Status of 10Gbps

- Transport ready
- Setup will be done during April in coordination with AURA

DWDM equipment

Path	lambdas
La Serena - Santiago	2xOTU-4 (100Gbps)
La Serena-Observatory	3xOTU-4 (100Gbps)

DWDM equipment

Status of the tender process

- Started: 07-Sep-2015
- Negotiated procedure, 4th rounds up to now
- 8 equipment providers submitted proposals

Next steps:

- Move forward with field test and compatibility test (camera)

Project schedule

1st semester 2016

- Fiber La Serena – Santiago
- Fiber La Serena – AURA Gate

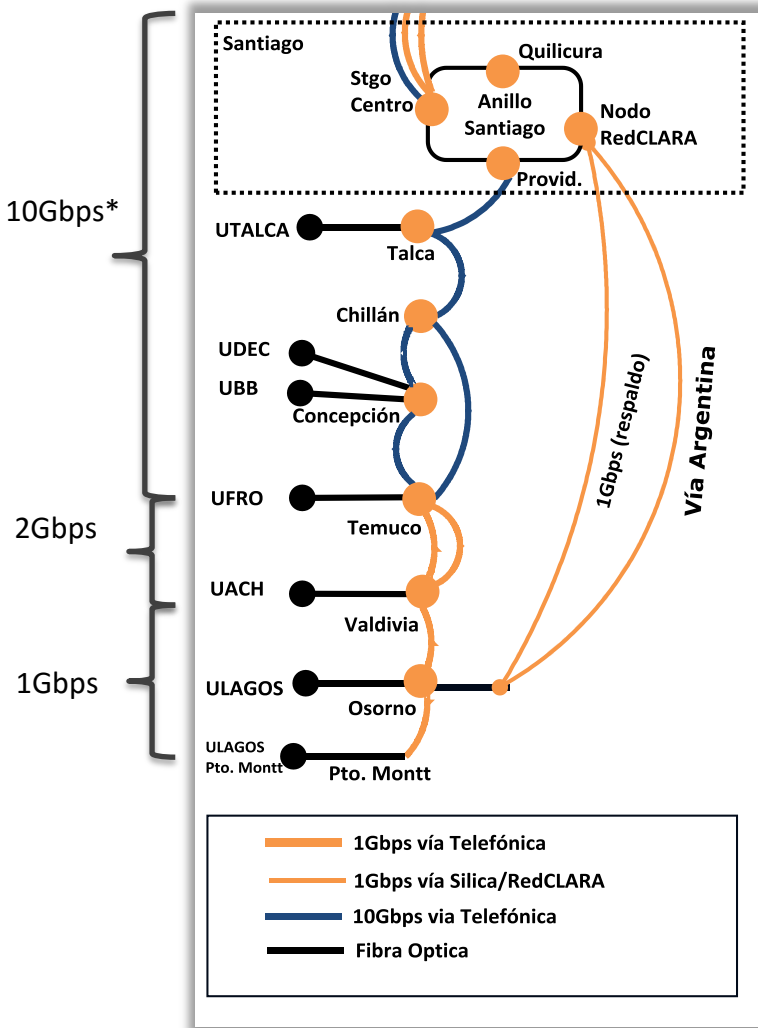

2nd semester 2016

- Equipment reception
- Deployment

Santiago – Puerto Montt

Backbone: Santiago – Puerto Montt

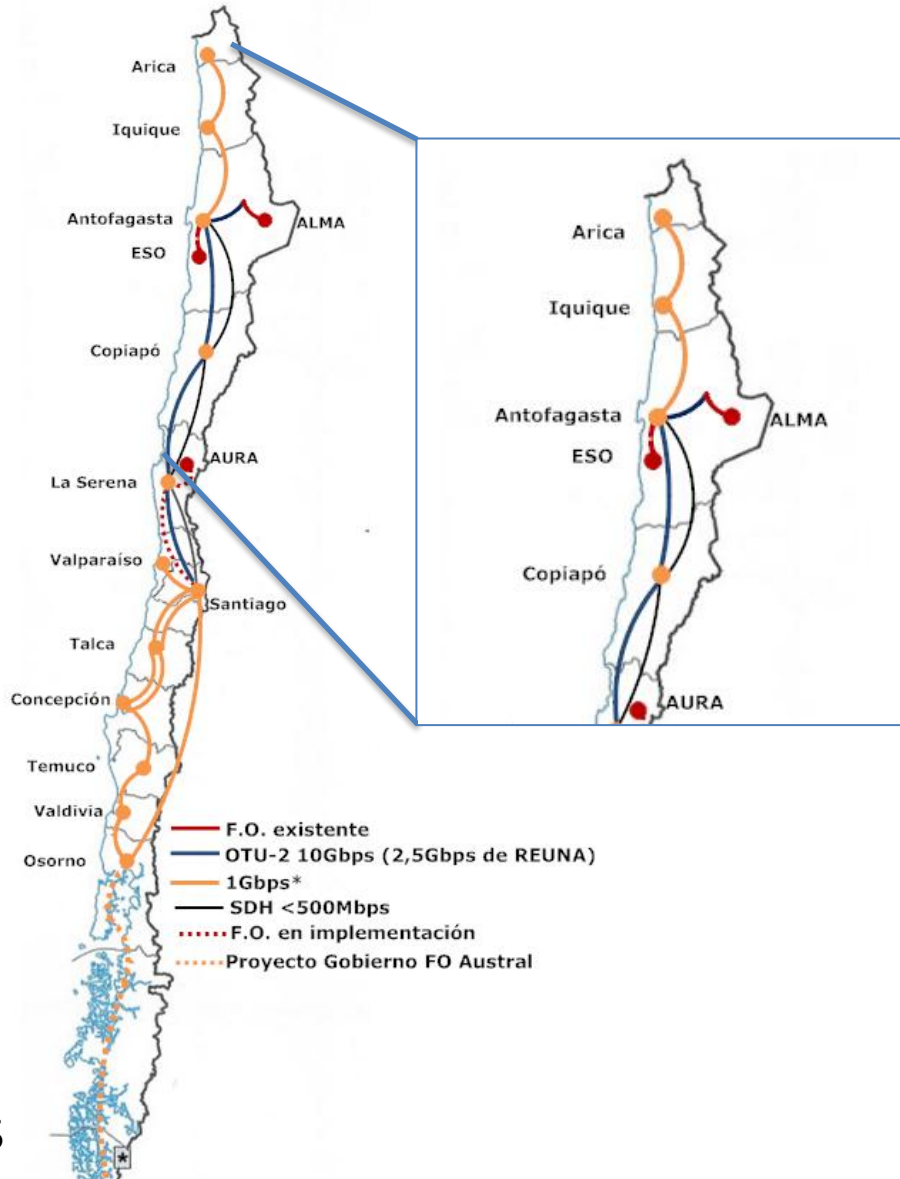

Upgrades

- Santiago – Temuco: 10Gbps
- Temuco – Valdivia: 2Gbps
- Osorno – Puerto Montt: 1Gbps (extension)
- 6 IP backbone equipment upgrade

Schedule

- Equipments already decided (EX920x Juniper)
- Transport network ready: May
- Deployment: June - July

Backbone: La Serena - Arica

- La Serena-Arica key path in the strategic development of the REUNA's partners
- Ideal primary and secondary paths
- In synergy with other projects, in particular BELLA project
- Medium term project

Chilean Backbone: The dream

Vision

- Move to a backbone based on fiber
- Light the fiber with the capacity needed
- Model based mainly in CAPEX instead of rent capacity
- Backup links (ring topology)
- Development in synergy with partners
